

John Lafferty is a professor in the Computer Science Department and the Machine Learning Department within the School of Computer Science at Carnegie Mellon University. His research interests are in machine learning, statistical learning theory, computational statistics, natural language processing, information theory, and information retrieval. Prof. Lafferty received the Ph.D. in Mathematics from Princeton University, where he was a member of the Program in Applied and Computational Mathematics. He was an assistant professor in the Mathematics Department at Harvard University before joining the Computer Sciences Department of the IBM Thomas J. Watson Research Center as a Research Staff Member, working in Frederick Jelinek's group on statistical natural language processing. He has been a member of the faculty at Carnegie Mellon University since 1994. Prof. Lafferty currently serves as co-director, with Steve Fienberg, of CMU's Ph.D. Program in Computational and Statistical Learning, and as an associate editor of the Journal of Machine Learning Research. His first glimpse of the power and magic of combining statistics and computation--in the practice of what has come to be called machine learning--was seeing the first decodings emerge from the IBM statistical machine translation system in the late 1980s.
